

UVClear Services

Disinfect and Sanitize Your School

UVClear's process for homes is superior to other methods for three main reasons:

- ❖ **It is Chemical Free.** Our UVC application is chemical free and does not leave behind fumes or any potentially toxic residue. Immediately after treatment of your home, it is safe for your return.
- ❖ **It is Extremely Efficient.** Ultraviolet light treats surfaces and furniture simultaneously. Surfaces include hard, soft, porous, horizontal (floors and ceilings), vertical (walls and dividers), and even irregular shaped (desks, sinks, or cabinets). In most cases, we can finish an entire home in 2 hours or less. Our units are industrial strength, provide a high intensity dosage of germicidal UVC, and are the same types used in hospitals and health care facilities.
- ❖ **It is Extensively Effective:** There are literally hundreds of pathogens that our UVC technology can kill, including some well known ones like influenza, COVID-19, staph (Staphylococcus), MRSA (Staphylococcus aureus), and E. coli (Escherichia coli).

UVC Light Disinfection Services could be used for:

- ✓ Locker rooms
- ✓ Gym mats
- ✓ Classrooms
- ✓ Sports equipment
- ✓ Offices
- ✓ Cafeteria/Food court
- ✓ Vending machines
- ✓ Nurses Offices
- ✓ Fieldhouse

UVClear uses germicidal ultraviolet light (UVC) to sanitize and disinfect homes, schools, and businesses.

UVC is a light spectrum whose energy eliminates bacteria and viruses, including coronavirus. This technology has been used for over 20 years and continues to be utilized for sanitizing hospitals.
